

Serhii Dychko

Middle FullStack Developer

I am passionate about building scalable and efficient web applications, with a strong focus on the Laravel stack. On a daily basis, I develop robust backend systems using Laravel, PHP, and Node.js (Nest.js), handling over 400k requests monthly. My expertise extends to frontend development (React.js, Next.js, Vue.js, Nuxt.js) and database management (MySQL, PostgreSQL, MongoDB), complemented by DevOps tools like Docker, Laravel Forge/Cloud, and AWS EC2. I specialize in creating modern, high-performance solutions using Queues, Redis, RESTful APIs, and CI/CD pipelines, ensuring seamless deployment and maintenance.

EXPERIENCE

Middle FullStack Developer

NewGen

April 2024 - Present, Kyiv Ukraine

I develop and optimize backend systems using Laravel and PHP, including implementing multi-queue mechanisms and enhancing performance through caching and BigData database optimization. On the frontend, I build and improve applications using Vue.js, TypeScript, and Inertia, while refactoring static UI components into dynamic ones with Livewire.

Junior - Middle FullStack Web Developer

FluidWeb

November 2021 - April 2024, Mykolaiv Ukraine

Contributed to a US-based online insurance product with 400k+ users. Integrated tools like Salesforce, Mixpanel, and Intercom for data collection, built APIs for US insurance companies, and implemented backend features like cronjobs, queues, and caching. Assisted in AWS environment setup (EC2, CodeCommit, IAM, CloudWatch, S3) for deployment.

Junior FrontEnd React Developer

GrandySoft

June 2021- September 2021 year, Mykolaiv Ukraine

Implemented JWT authorization in React. Developed a custom UI kit for the project. Extended existing functionality for the WEB CAD system.

EDUCATION

Bachelor Degree of Computer Science

Black Sea National University

June 2023, Mykolaiv
